Demands are Growing; Needs are Changing

Database developers are tasked with creating software applications that include complex business logic and accessing ever-changing database ecosystems. Both these aspects must be properly understood to create high-performing applications. Unfortunately, corporate database ecosystems are complex. As database environments grow in volume, velocity, and variety, the database developer's role becomes even more challenging and time-consuming.

Some of the most daunting challenges are:

- Working across different database platforms
- Visualizing and creating complex SQL queries
- Integrating database development with **source code control**

Modern database developers need tools to work more efficiently. Database developers should be able to seamlessly work across disparate database systems and integrate their work with source control systems as part of their regular software development cycle. Only by simplifying an organization's database ecosystem and adapting to the developer's work environment, can the database developer keep up with modern data trends.

Rapid SQL helps database developers and DBAs more rapidly produce high-performing SQL code. Supporting all major database platforms from a single, intuitive interface, Rapid SQL lets teams bring standardization and efficiency via its powerful, heterogeneous SQL IDE. Rapid SQL's robust development environment simplifies and streamlines SQL scripting, debugging, query building, object management, project management, and version control – in both live databases and offline source code repositories.

Develop SQL Code Quickly, Efficiently

The SQL IDE is a clean, slick development environment, ideal for creating and modifying SQL code geared to the needs of application developers. Real-time quick fixes flag and correct inefficient SQL automatically. The IDE is also equipped with SQL code assist, real-time SQL syntax validation, and project level SQL file cataloging and search features.

Visually Accelerate Query Building

Database developers can save time and start developing SQL code immediately with Visual Query Building tools. Rapid SQL gives you the ability to construct complex SQL statements with point-and-click ease using the Visual Query Builder.

Debug SQL Code, Functions, and Stored Procedures

SQL Debugger simplifies the task of hunting down and eliminating coding errors. An extremely useful database productivity tool, the SQL Debugger lets you debug SQL Server, Oracle, Sybase or DB2 stored procedures as well as Oracle functions. The Debugger features basic execution, line-by-line execution, breakpoint support, and other common debugging features.

General Features	
Multi-platform support	Manage all major DBMSs from a single interface. Support includes Oracle, SQL Server, Sybase, DB2, MySQL, InterBase, Firebird, and PostgreSQL.
embarcadero® appwave™	Enables centralized license management and tool deployment.
Unicode support	Full Unicode character support throughout the application.
Intuitive interface	Automates common and repetitive tasks with easy-to-use SQL editors and wizards.

Object Support	
Graphical object editors	Create, drop, or alter a wide variety of database objects, including tables, constraints, indexes, views, procedures, functions, triggers, and packages. Editors are common for all objects (across all platforms).
wizard-driven object creation	Wizards guide users through the creation of objects, prompting for the options that are applicable to objects found on the selected database platforms.
Grouped object command execution	Execute database commands against a select grouping of objects (drop, compile, analyze, etc).
Extended alter support	Provides the ability to generate complex scripts as a result of object manipulation (inserting a column in the middle of a table).

SQL Scripting and Editing	
Visual query builder	Constructs even the most complicated SQL statements with point-and-click ease.
CODE templates	Eliminates the need to memorize and type SQL syntax.
SQL editor	Code folding, code collapse/roll-up, syntax coloring, hot key assignments, configurable auto replace of objects, bind variable support, selective statement execution.
Context-sensitive dbms actions	DBMS actions, such as Extract and Drop, are available directly in the context menu of the appropriate tokens in the SQL editor.

SQL Scripting and Editing	
Advanced code assist	Lists context-sensitive suggestions as you type (e.g. tables, columns, procedures, functions, and code templates) and is available offline.
Code formatting and profiles	Code folding, syntax coloring, comment toggling, and other auto formatting features make it easy to read, navigate, and edit large SQL files. Customize and share various SQL formatting options by creating SQL formatting profiles.
Syntax and semantic validation	Validate SQL files and flags all DBMS-specific parser violations or references to objects not found in the target database.
Quick fixes	Real-time parsing provides code quality suggestions for improving SQL performance as you type.
SQL Debugging	Debug Java, step seamlessly into SQL (i.e. stored procedure) and back into Java again—true system-wide, round-trip debugging.

Debugging, Performance Optimization	
Code analyst	Performs detailed response time analysis on the execution of stored procedures and functions.
SQL Debugger	Debugs programmable objects such as stored procedures, functions, packages, and triggers. Available for DB2 for LUW, Oracle, SQL Server, and Sybase.
SQL profiler	Captures metrics of various PL/SQL programmable objects on Oracle 8.1.5 and higher.

Data Governance	
Inline Metadata	Gives users real-time metadata visibility in the SQL IDE and will gain valuable context in SQL query development with awareness of sensitive data. Examples of metadata attributes are: table descriptions, PII, data governance policy information, etc.
Centralized Data Source Repository	Provides the functionality for users to work from a common, centralized data source repository.

*Data Governance features require ER/Studio and Team Server

Support Data Governance Initiatives Through Inline Metadata

Enhance the data quality of your organization with Rapid SQL's developer capabilities. Instantly gain valuable context to SQL query development and become aware of sensitive data stemming from PII, regulatory, data governance policies and their policy owners.
