# RAD Studio™ 10 Seattle

The Ultimate Application Development
Platform for Windows 10, Mac,
Mobile and IoT

Embarcadero® RAD Studio™ 10 Seattle is the fastest way to build data-rich, hyper connected, visually engaging applications for Windows 10, Mac, Mobile, IoT and more using Object Pascal and C++. Quickly and easily update VCL and FMX applications to Windows 10 with the new Windows 10 VCL Controls, Styles and WinRT/UWP services components.

Ride the Windows 10 Wave

Windows 10 is being rapidly adopted. With RAD Studio 10 Seattle, get your VCL apps and users to Windows 10 now with the Windows 10 platform look and feel and new Windows 10 features and services.

Use new VCL UI controls and Styles to create great looking Windows 10 apps and use new Windows 10 VCL components to access new platform features and services, including Notifications, Contracts and more.

Double the IDE Memory, Twice the Power

RAD Studio 10 Seattle delivers more developer productivity than ever around the daily activities of coding, building and debugging. In addition to enhanced multi-monitor support, the IDE can now access double the memory, so you can build and debug those large projects with ease.

RAD Studio 10 Seattle has integrated and vastly improved performance with over 20 IDE productivity features. These are a set of features all developers benefit from every day.
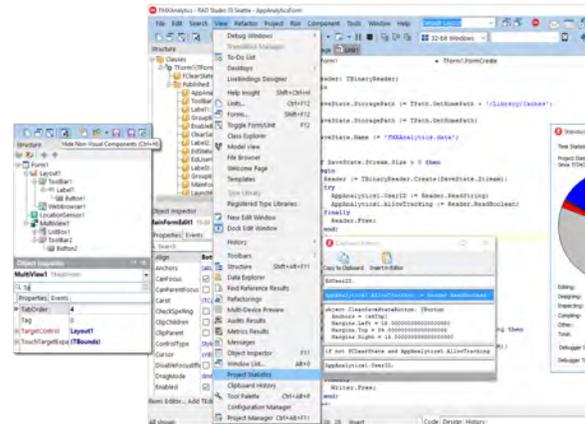

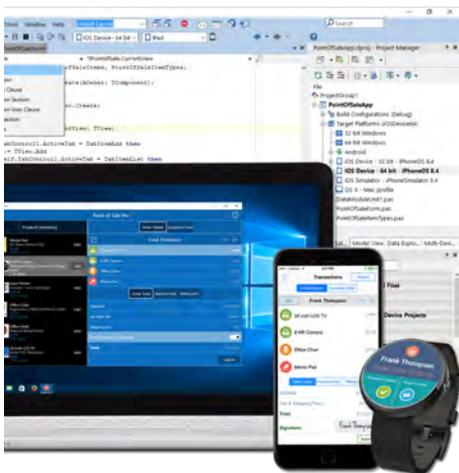

Hyper Connected Apps for Windows, Mac, Mobile and IoT

Connected apps are distributed across platforms and multiple form factors like desktop, smart phone and tablets and also includes new IoT form factors like wearables, sensors, proximity awareness with beacons, smart light, smart sound, and gesture recognition devices for both physical and audible human input.

The process of designing, building and deploying connected apps is radically simplified by the combination of new and improved features in RAD Studio 10 Seattle, including Wi-Fi, Bluetooth/LE components, AppTethering, EMS middleware and cloud integration through REST, like popular MBaaS services.

Here's what's new in RAD Studio 10 Seattle

Build and debug large projects with twice the available IDE memory

Extend existing Windows 10 applications with tethered mobile companion apps using Wi-Fi and Bluetooth connectivity

Get your apps and users to Windows 10 now!

Over 20 new IDE productivity features including the all new searchable Object Inspector

New VCL UI and Services Components for Windows 10

Build Android services that run in the background with Object Pascal

RAD Studio 10 Seattle System Requirements

- 1 GB RAM (2 GB+ recommended)
- 9-63 GB free hard disk space depending on edition and configuration, including space required for temporary files (Delphi requires 7-37 GB, C++Builder requires 9-58 GB)
- DVD-ROM drive (if installing from a Media Kit DVD)
- Basic GPU – Any vendor DirectX 9.0 class or better (Pixel Shader Level 2)
- Intel® Pentium® or compatible, 1.6 GHz minimum (2GHz+ recommended)

- 1024 x 768 or higher resolution monitor
- Mouse or other pointing device
- Microsoft® Windows 10 (32-bit and 64-bit)
- Microsoft® Windows 8 or 8.1 (32-bit and 64-bit)
- Microsoft® Windows 7 SP1 (32-bit and 64-bit)

New Features

Support for calling WinRT APIs

Support for Windows 10 Notifications using the NotificationCenter component

Support for Contracts, the system mechanism for sharing information with other Windows 10 applications using the new SharingContract component

New VCL Controls including ToggleSwitch, SplitView, SearchBox, ActivityIndicator and RelativePanel with Win 10 Styling and support. Can also be used on previous versions of Windows

Windows 10 specific VCL styles to build applications matching Microsoft's Modern look and feel

VCL Styling improvements, including support for styling common dialogs and the TWebBrowser component

IDE built with large memory address model, to provide significantly more memory to the embedded compilers, integrated debuggers, and various tools executed in the IDE process

Form designer option to hide/show non-visual controls icon (reducing form design potential clutter)

Improved multi-monitor support in the IDE, with the ability to place most forms and panes on different secondary monitors

Object Inspector contents can be filtered to display specific elements

Full customization of the Object Inspector layout, with the ability of hiding the description panel, the quick actions, and the new filter panel

Unsaved file auto-recovery for the IDE – unsaved work is periodically saved to a temporary location.

Structure View Icons representing the corresponding component

Enhanced IDE Project Options to easily enable High-DPI Awareness in your applications, plus Windows 8.1/10 multi-monitor support for VCL applications

DUnitX unit testing support for mobile platforms (iOS and Android)

Prototype synchronization – as you change the prototype for a function, you can use this feature to synchronize the interface and implementation sections to match

Windows 10 specific FireMonkey styles to build applications matching Microsoft's Modern look and feel and StyleViewer for Windows 10 Style in Bitmap Style Designer

FireMonkey native style presentation for Windows for Edit and Memo platform controls

Mouse-over Hints support for FireMonkey visual controls on desktop

Allow the use of IFMXDragDropService to drag data to another applications on OS X

FireMonkey apps can receive intents, regardless of the source (email, web link, other app). A new sample demonstrates this ability

C++ 11 CLANG-based compiler for Win32 (bcc32c)

Support for C++ parallel compilation

FireMonkey controls zOrder support on Windows

Remote iOS 64-bit device debugging

Support for Android Services in the IDE, including wizards to create Android Services and to add them to an existing Android app (Delphi only)

Touch animation for Android platform

Complete FireDAC support for the NoSQL MongoDB database, including a new FireDAC MongoDB driver

MongoDB specific datasets, including TFDMongoDataSet, TFDMongoQuery and TFDMongoPipeline

MongoDB API wrapping classes, including TMongoConnection, TMongoDatabase, TMongoCollection and more

Specialized JSON readers and writers, including the new TJsonTextReader and TJsonTextWriter classes, and support for Extended JSON

MongoDB query, pipeline, update commands, and more with fluent methods builders

JSON (JavaScript Object Notation) processing using a JSON.NET implementation for JSON streaming with new readers and writers (including base TJsonReader and TJsonWriter classes)

Binary JSON (BSON) readers and writers support, as part of the same JSON.NET architecture (including the new TBsonReader and TBsonWriter classes)

JSON and BSON fluent method builders, including the TJSONArrayBuilder and TJSONObjectBuilder classes

JSON and BSON fast forward-only iterator (TJSONIterator)

Example of the use of the FDSchemaAdapter component in DataSnap applications

Modern looking SelectDirectory function for VCL applications and the IDE

New TBeaconDevice class for turning a device on one of the supported platforms into a "beacon"

ScrollBox platform controls for iOS

DataSnap clients uses System.NET for HTTP and HTTPS, with no need to deploy the OpenSLL client library

Plus many other great features
